

- B09 A pump station and rising main is to be constructed with the approval of Scottish Water at the bottom of the access road, adjacent to 15 Ladehead. With the exception of a small kiosk constructed near the floodwall, all works will be below ground level. Where the existing outfall crosses beneath the new floodwall its surround will be sealed to prevent backflow.
- B10 A pump station will be constructed with the approval of Scottish Water for the existing 450mm diameter outfall, adjacent to No. 2 Whitingford. With the exception of a small kiosk located near to Newhaven Bridge, all works will be below ground level.
- B11 Remedial works will be required to Nos. 1, 3 & 5 Bonnington Avenue flats. This will include wall strengthening and replacement of the existing lower panel windows with toughened glass and works to vents and overflow systems below the flood defence level.
- B12 The disused mill lade near 10 Ladehead and downstream of Bonnington Paper Mills will be sealed by excavating porous material and backfilling with clay or sealing with trench sheets.
- B13 Localised re-profiling of the left bank may be required for a distance of approximately 100m immediately downstream of Bonnington Bridge.
